should be declined by saying, 'God compensates me in a better way'.

The following three instances are concrete situations showing the working of the social structure. The first is the installation of a new corn mill by all the clans in the village to bring to an end the monopoly of the already existing privately owned mill. The rough estimates were divided into 24 kirats (parts), each section responsible for collecting the money equivalent to its 12 kirats.[1] In the second process of distribution, each section divides its share amongst the clans, and the head of each clan is responsible for collecting his share from family heads; by dividing his kirats into sahms, the people of his clan could buy a minimum of one-tenth of a sahm. No section or clan could be helped or its shares be taken by another. It was interesting to listen to the village crier calling out the names of the clans and the two sections, to induce haste in collecting the money.

Such procedure was followed for repairing the village mosque. In this case the question was not so much that of collecting money, as of recruiting the men to bring stone, water, straw, etc., for the repairs; and this was also dealt with on the same structural basis.

The third instance was the allocation of new building land to the village, which was also first divided into two sections; then each section was divided into equal parts amongst its clans, which in turn had to divide its share among the families.

The system of village government reflects a combination of central authority agents and the village social organization. The village head is an official called 'Omda' who used to be elected from a list of five people who own not less than 10 feddans. Two years ago, the law was changed and the Omda is now elected from amongst thirteen people who own enough land to make them eligible. The job is unpaid, and it is reckoned as a privilege to be elected. The Omda's seniority is something like the medieval *primus inter pares*. He represents the village on official occasions. One of his traditional and honorary functions is to receive guests, travellers, and government officials in his guest house. Silwa has also two unpaid 'Sheikhs' each representing one of the two sections of the village and thus commonly referred to as 'Sheikh hissa'; these are also elected from amongst those who are eligible (minimum requirement was 5 feddans, now being relaxed). The Omda and the two sheikhs settle the disputes that arise in the village, usually with the aid of Arab councils, or with the help of people whom they select on different occasions. Each sheikh is primarily concerned with the problems of his section (hissa).

The central government is represented by the police headquarters with a police officer or constable in charge and policemen and ghafeers. While the policemen are always from outside the village, the ghafeers are villagers, put up usually from different clans, acting as the Omda's messengers, as well as the local agents between the village and the police headquarters.

[1] The feddan has 24 kirats, and each kirat 12 sahms.

THE VILLAGES AND THEIR INHABITANTS

The villages are intersected by narrow lanes—in most cases they can hardly be dignified by the name of streets—progress along which is often impeded, sometimes almost entirely blocked, by piles of refuse and mud. In some of the larger villages there may be one or two broader streets, forming the chief thoroughfares (Fig. 8). At the side of one of the narrow lanes there may be an open space in which palm-trees grow (Fig. 9), and here the village weaver often arranges the warp for his cloth, the threads being attached to the trunks of two of the trees (Fig. 10). When this process is completed the warp is taken indoors and attached to the

loom, which usually stands in a somewhat dark room, with mud-coloured walls, and so small in size that it is impossible to obtain a satisfactory photograph.

Itinerant vendors ply their trades up and down these tortuous village lanes, uttering their characteristic cries. For example, the onion-seller advertises his wares by calling out, " Oh, onion, sweet as honey ! " The cries are usually intoned in a minor key, sounding to the uninitiated more like a plaintive chant than the proclamation of goods for sale. Another hawker may trade in coloured cotton cloths, printed with various designs to suit all tastes. He usually conveys his goods about on a small hand-cart. From such humble beginnings more than one fortune has been made, for the peasants are fond of hoarding their money, their daily living costing them but little. In time the small sums thus

MR13 Fellahin MR13
Upper Egypt

carefully put by amount to a considerable total, which may be profitably invested. Thanks to a lucky deal in cotton, or some other venture, the former humble itinerant vendor finds himself well on the way to becoming a man of substance.

The house-doors are often decorated with a china plate or saucer fixed into the masonry above the lintel, as a charm against the evil eye. A house may also be decorated with coloured line-drawings of camels, boats, trains, trees, and other objects, some hardly

FIG. 9. A VILLAGE STREET

identifiable. Such artistic efforts denote that one or more members of the family inhabiting the house have performed the pilgrimage to Mecca, the design representing the various objects seen by the pilgrim on his way to the sacred city.

The interiors of the villages are often very picturesque, in spite of the dirt and squalor usually found in them. The Arabs are far more particular in this respect, their villages and settlements being much cleaner in every way than those of the Egyptian peasants. This difference between the two races is so marked that I can almost always tell if a village is Arab or Egyptian directly I enter it.

A mosque is to be found in every village, and in many places

CHAPTER III

PERSONAL DECORATION AND ORNAMENTS

LOVE of personal adornment seems to be instinctive in the human race, and it has probably existed in some form or another as an element in human character from the earliest times. The beautifying of the person may be achieved in a variety of ways, sometimes involving mutilation of the body. A study of the true inwardness of ornaments and personal decoration in general is most instructive, and may serve a useful purpose on occasions, as I hope to show later.

The simple jewellery of the modern Egyptian peasants, and their body-markings, such as tattooing, supply material for an interesting chapter in the study of these people.

The *felláḥeh* (peasant woman) is by no means more backward than the average Englishwoman in her endeavours to make the most of whatever personal attractions she may possess, and, as I have stated, her demands for gold and silver ornaments may involve her unfortunate husband in considerable financial embarrassment.

The young girl, usually a mere child, who is on the look-out for a husband often wears a necklace of particular shape, made of gold coins. It is quite an attractive ornament, and also serves as an outward and visible sign of her wealth. A man when about to marry may present his bride with such a necklace, investing some of his money in it, for the women's jewellery is often regarded as a safe form of investment, which can easily be turned into ready cash should the necessity arise. Every girl has her ears and nose bored at a fairly early age, when she becomes the proud possessor of a pair of earrings (Fig. 18, bottom), as well as of a nose-ring (Fig. 18, in centre of necklace). These may be of gold or silver, or, in the case of the poorer people, even of brass. Anklets may be of silver-gilt, silver, or some white metal. Bracelets are usually much in request, and are made of glass of various colours (Fig. 18, extreme left and right), of small beads woven together to form a

THE FELLAHIN OF UPPER EGYPT

45A It is the custom of many of the country folk to hide their money underground, either in their houses or outside, and I know of more than one very rich man who refuses to put his money in a bank, but prefers to bury it. Such people, of course, though wealthy, [89] are entirely without education, beyond a knowledge of reading and writing. Perhaps they may confide the secret as to where the money is buried to a brother or wife, but sometimes they die without telling anyone where it is concealed. I have been told by one or two officials that such stores of money have been accidentally discovered from time to time, and these discoveries are quite enough to account for the large number of stories about hidden treasure which are current all over the country.

115A As I have already stated, and as I propose to show in the following paragraphs, the magicians' powers are sometimes employed for sinister purposes.

If a man wants to make his wife hate him so that he may easily divorce her he calls in the aid of a magician, who will proceed as follows. He takes an egg which was laid on a Wednesday, and on the shell of it he writes certain magic letters, which are supposed to form the name of the King of the Tombs. He then takes the egg and buries it in a tomb, but on no account must anyone know which tomb it is. For Christians it would be the tomb of a Christian, for Muslims that of a Muslim. By the time that the magician has returned from depositing the egg in its hiding-place the charm has already begun to work. The egg must always be left where he placed it. Should anyone discover its secret hiding-place and remove it the charm loses its effect, and the woman would again love her husband.

If a man wishes to procure the death of a man whom he regards as his enemy he will go to a magician, who acts in the following way. He takes a hen and kills it, keeping the blood in some vessel. He then obtains an egg laid by a hen that has black feathers only, and on it he writes this magic square (Fig. 116) with the blood of the hen he has killed. He burns some incense, holding the egg over the fumes, with the inscribed side downward, repeating the following incantation three times: "In the Name of God, the Compassionate, the Merciful. By the Name of God, the Mighty King and Majesty. Possessor of Possessions, the Throne and Seat, the Heavens and Earth. Blessed be God, Lord of the World, Lord of all power and transcendent might. Light of Light and Spirit of Spirits. All Glorious, Holy Lord of Angels and the Spirit, praise

511 why the balance of the fellah's budget is so easily upset,
434 and that is why he is so often swamped by debts and interest.

● 454 If in any given year, by a stroke of good fortune, none
181 of these extraordinary expenses befall him, the fellah, hoarding piastre after piastre in a pot hidden in the earth, can at last see his dream come true, and buy a *gamoosa* or a few *kirats* of land. It is this alluring possibility, always just round the corner, which makes him continue year after year, like the soil and with the soil, the same unwearying work.

or like a silver thread in the distance. He resorts to it more often than to his fellowmen. He does not pray to it, as his ancestors did, but he constantly visits it. The Nile is in his blood. There is the same intimate bond between the Nile and the fellaheen as between the sea and the fishermen of Brittany. They even call it *el Bahr*, the sea, and their fields they call "shores" (*el rif* — plural *el arias* — the usual word for the Egyptian countryside) (ᵃa). At High Nile they believe women to be more fertile and men more healthy; marriages are most often celebrated at this season. If a child is sickly or ill, his mother takes him on the Nile at this time, and makes him throw sweets and dates into the clayey waters, with the words "Oh Nile, let my strength grow like your depth". A dying fellah, before he breathes his last, is given a final draught of its living water.

In the Coptic Mass there is the following prayer: "Vouchsafe, O Lord, to bless this year the water of the river. By Thy grace bring it to due height. Gladden the face of the land, that the fields may have water and the crops be multiplied."

The silt of the Nile has its part also in the rites of life and death. The fellâha, when her time is coming, crawls to the brink of the water and takes up a handful of moist earth, which she will swallow at the time of delivery to ensure a successful birth.

When the *mizayen* cuts the child's hair for the first time, the hair ceremoniously cut off is not flung to the winds, but carefully rolled into a ball of earth.

Professional mourners bedaub their breasts, heads, and arms with mud as a sign of grief. The body is put into the earth without either coffin or clothes.

The fellaheen bury in the earth the jar containing their savings, and charms which they wish to take effect. Every birth affects the soil; the after-brith is buried inside the house, and the umbilical cord, wrapped up in a little bag with a few grains of corn, is dug into the father's field.

The fruits of the earth are still more closely involved in this peasant mysticism. The analogies between vegetable life and the peasants' own extremely physical existence make them believe in an interplay of fertility between the two.

The ceremonies of the seventh day, when the newly-born child is washed and given a name, often include the following
